

Ultrasound – Biopsy

To Schedule: (319) 861-7778

Questions about your procedure: (319) 398-6050

What is an Ultrasound?

An ultrasound scan is a medical test that uses high frequency sound waves to produce images of structures within your body. The images can provide valuable information for diagnosing and treating a variety of diseases and conditions.

Preparation:

If you are on blood thinning medications, such as aspirin, these will need to be discontinued for 7 days prior to the exam. Please consult with your ordering provider prior to stopping any medication.

Procedure:

You will be asked to lie on a bed or stretcher. Prior to beginning the examination, a technologist will ask you to move or remove clothing in the area to be imaged. For your privacy, only the area to be imaged will be uncovered. A warm gel will be placed on your skin. The technologist will use a hand-held instrument (called a transducer) against your skin to acquire images.

Ultrasound is used to guide the doctor to an area in the body (such as thyroid, liver, breast or kidneys) to obtain a tissue sample to check for abnormalities. A biopsy will take 30-60 minutes.

PLEASE BRING THE FOLLOWING TO YOUR APPOINTMENT: A PHOTO ID TO VERIFY YOUR IDENTITY

Mercy Hospital Parking:

Park in the Mercy Medical Center 10th Street Parking Ramp, located at the corner of 10th Street and 8th Avenue SE. Proceed to **Ground (G)** level and follow the signs to "Radiology (X-Ray)," also located on **Ground (G)** level.

Results:

A radiologist will review the images shortly after the exam is completed. A written report will be sent to the provider who ordered your exam. Your provider will discuss the results with you. Results will typically be available for your provider within two business days of the exam. Results will also be sent to your MyChart account.
